ADVANCING THE ROLE OF GEOSPATIAL KNOWLEDGE IN INDIAN ECONOMY

The 21st edition of GeoSmart India 2021, with the theme Advancing the Role of Geospatial Knowledge in Indian Economy, successfully concluded after three days of comprehensive discussions, engrossing plenaries and engaging interactions at Hyderabad International Convention Centre in Hyderabad from 7-9 December 2021. The conference kick-started with the sessions on Evolving National Geospatial Industrial Strategy, Empowering Next Generation Resilient Infrastructure, Location Analytics and Business Intelligence, and Geo-Enabled Good Governance. The conference saw the participation of 1400+ delegates from over 24 states.

The three-day conference highlighted the value of geospatial information for socio-economic development, its contribution to the overall GDP, and its role in the Government of India's flagship projects such as Sagar Mala, SVAMITVA, Namami

Gange, which are helping to build a self-reliant, sustainable, and resilient India. Comprised of the Who's who of the Indian geospatial diaspora, policymakers, influencers, technology, and solutions providers, academia, researcher, and end-user segments, the conference brought together all the stakeholders of the Indian geospatial community to one platform

The conference featured a large scale exhibition, top ranked keynote speakers, major industry segments, high-level discussion programs and various social networking events. A total of 140+ speakers shared their in over 26 thematic sessions, under 6 co-located programs – Water Resource Management, Defense and Intelligence, Construction and Infrastructure, Space Infrastructure and Indian Economy, Location Analytics and Business Intelligence and Surveyors' Training Program

Special Address

Technologies are the key drivers of development and progress across the globe. Leveraging technologies for development and sustainability is more important for emerging economies like India. With the transformational changes in geospatial technologies like mapping, surveying, remote sensing, and GIS, we need to explore and apply these technologies for progress, sustainability, and development. Further, the Government of India's decision to liberalize rules for acquiring and producing geospatial data and services, opening space sectors for private players, and launching the Indian Space Association injected new energy in the geospatial ecosystem. ”

Dr. (Smt.) TAMILISAI SOUNDARARAJAN

Hon'ble Governor of Telangana and
Hon'ble Lt. Governor of Puducherry

International relations thrive on order, and we are living with a quest for order in an unordered world. Space, commercial activities of space, civilian use of space is for the benefit of all. The trick, perhaps is to separate military uses from the less obvious civilian uses. It is a difficult task, but it is not a choice but a necessity for us to go down that path. ”

Ambassador Syed Akbaruddin

Dean, Kautilya School of Public Policy

PLENARY 1:

Advancing the Role of Geospatial Knowledge in Indian Economy

A long-awaited time has come when geospatial technology and geospatial knowledge infrastructure will significantly change the way India is going to adopt this technology and move forward in this world. In a way the entire world is looking at how India is going to tackle its problems & how it is going to guide or lead the world in ensuring sustainable life on planet Earth.

A S Kiran Kumar

Vikram Sarabhai Professor/ Member Space Commission, Department of Space

With vaccinations in India, technology and logistics were perfectly supported through the use of geospatial technology. We should have transformational changes instead of instrumental changes. It is in this context the policies that Govt. of India has brought about spatial and drone policy. I must appreciate the accumulative growth rate of 12–13% in the geospatial industry despite COVID -19.

Amit Khare

Advisor to Prime Minister, Government of India

07 December 2021 | Geospatial Knowledge in Indian Economy

“Geospatial infrastructure becomes open and interoperable, and it becomes a network of systems, services, and applications, and that’s where transformation states happening, and it can deliver robust applications.”

Agendra Kumar

Managing Director, Esri India

“Geospatial plays a vital role in decision-making for all. I’m also looking at how we’re mapping all the skills, how every five sqm, what skill sets are available, and how easily a common man can access those skill sets and quickly take help and take forward the challenges they have.”

Dr. S Chandrashekhar

Director IICT and Designated Secretary,
Department of Science and Technology

PLENARY 2:

Evolving National Geospatial Industrial Strategy

Policy reforms are the first step towards harnessing the potential of geospatial technology and information through the scalability of applications and democratization of knowledge. This will happen when our companies in the commercial sector as well partners at local government and non-government organizations will all work towards making a scenario where local community development, good governance, and water resource management, etc.”

Sanjay Kumar

CEO & Founder, Geospatial World

The societies are primarily built on the technological advancements right from the invention of wheel or vehicle. People make decisions about technologies that can transform, translate and convert the capabilities and functioning of human dignity, excellence, and enhancement.”

Dr. Shailesh Nayak

Director, National Institute of Advanced Studies

Geospatial systems and maps occupy a fundamental role in helping visualize, understand and inform decision making in all key sectors, be it agriculture, water, infrastructure, and economy.”

Amitabh Kant

CEO, NITI Aayog

The industry has come to a level of maturity. The timings in terms of thinking about the industrial policy couldn't have been any better than today. Technology has not been as best as it is today anywhere in the past. It is running at an accelerated pace never experienced by humanity. The other reason is the liberalization mindset of the government.

« | **BVR Mohan Reddy** | »
Founder & Executive Chairman, Cyient

India is the next big market for geospatial technology because dependency is very low, but opportunities are immense. We need to be innovative with business models, people want asset-like models these days, and they want vendors to be trusted advisors.

« | **Rajan Aiyer** | »
Managing Director, Trimble India

The policy talks about the social infrastructure part – CORS Network will be one component, National Spatial Reference Network, and Database creation, a key to any foundation. It also talks about the national data registry, geo-platform, which will streamline the process of decision-making in the Government of India.

« | **Sunil Kumar** | »
Joint Secretary, Department of Science and Technology

*Surveying using Drone technology is limited to the village habitation, but by the CORS network, we now can geo-reference the entire maps. These maps for village **abadis** are on a 1:500 scale, but the other maps are on a 1:4000 scale.*

« | **Alok Prem Nagar** | »
Joint Secretary, Ministry of Panchayati Raj

PLENARY 3:

Empowering Next Generation Resilient Infrastructure

“A data-driven approach is a way to go. BIM has real-world information which can be used for planning, construction, and operation. The policy is critical as soon as we start to do something new. In countries like Singapore, Dubai, and many European countries, there are BIM policies and projects that need to be submitted for construction approval.”

« | **Sunil MK**
| Head - AEC, Autodesk

“There should be a data-driven and integrated approach using IoT, sensors, and overlaying data on geospatial technologies on map components.”

Srinivas Rao »
CIO/CTO, L&T IDPL

“According to the projection between 2015 and 2040, the world will invest close to 90 trillion dollars in developing infrastructure. It will be a massive investment in the infrastructure system and tremendous opportunities offered by emerging technologies to plan, design, build and operate infrastructure systems.”

« | **Kamal Kishore**
| Member Secretary, National Disaster Management Authority

“MoRTH has prioritized LiDAR technology and issued circulars that DPR consultants should use at the stage of doing the project report.”

Amit Ghosh »
Additional Secretary, Ministry of Road, Transport and Highways

PLENARY 4:

Location Analytics and Business Intelligence

“AI & IoT will be the lethal combination, and enterprises can start using these technologies to innovate the business models because India is focusing more on cost efficiency and improving operational efficiencies.”

Sunil David

Regional Director – IoT, AT&T

“Location market has a massive opportunity for investment. Autonomous companies, enterprises like PhonePe, or large enterprises like Airtel, HDFC and Digital transformation by enterprises are the three large industrial segments and location intelligence market potential.”

Nikhil Kumar

President –Geospatial, MapmyIndia

PLENARY 5: Geo-Enabled Good Governance

Data analytics and spatial analysis should be made available to more people especially academia and industry, to make the best use of our natural resources and improve productivity as well as the prosperity of the nation

Shalini Rajneesh

Additional Chief Secretary, Department of Planning, Karnataka

Public-Private Partnerships is the model of good governance. It is not only the economic system, but our social system needs to be empowered through geospatial integrations. Geospatial technology entered the country when there was a requirement for integrated rural development.

Debpriya Dutta >>>

Associate Head - NGP & Head - SEED,
Department of Science and Technology

“ Smart cities are looked at from the point of view of exploitation of geospatial technology to the maximum and use of application bringing improvement in sustainable development and quality of life and liveability of the city. ”

Sanjay Kolte

CEO, Pune Smart City

“ Satellites for cartography, mapping of ocean atmosphere, etc, have created a basic foundation at the country level which can drive towards geospatial development. ”

Vinod Bothale

Associate Director, National Remote Sensing Centre

Key Programs

1

Space Infrastructure and Indian Economy

 2 Days  20 Speakers

Participation by major organizations like Indian Space Association, Google, National Remote Sensing Centre, Godrej Aerospace, Synspective Inc, Survey of India....

2

Defence and Intelligence

 2 Days  19 Speakers

Participation by CRPF, Indian Army, MCEME, Maxar, Roter Group....

3

Water Resource Management

 2 Days  20 Speakers

Participation by major organizations like National Mission for Clean India, Central Groundwater Board, Art of Living, National Water Development Authority, Haryana Water Resource Authority, Orange City Water Nagpur, Thrissur Municipal Corporation....

4

Construction and Infrastructure

 1 Day  15 Speakers

Participation by major organizations like Atkins, Knight Frank, National Construction Academy, Autodesk, Aurangabad Smart City Development Corporation Limited, Uttar Pradesh Public Works Department....

5

Location and Business Intelligence

 1 Day  12 Speakers

Participation by major organization like Delhivery, Department of India Post, Ola Mobility, Mahindra & Mahindra, World Resource Institute....

Defence and Intelligence

- Artificial Intelligence and Machine learning can gather and store data, analyze, and predict the future course of action to achieve organizational goals.
- They work towards improved decision making, increased accuracy, solving complex problems, and performing high-level computations.
- According to International data cooperation, with the help of Artificial Intelligence and Machine learning, by the year 2025, there will be a colossal amount of data available.
- The Constellation of military satellites is becoming capable of communicating and gathering information from electromagnetic spectrums for both active and passive modes of operations for forces.
- There is a paradigm shift in cyberattacks

because monitoring of networks is beyond human surveillance and needs high-level computations for threat detection since increased connectivity with cellphones (AI) and IoT devices has provided a higher service area for hackers.

- Drone warfare will slowly become the future of warfare with its high accuracy of bombardment with high artillery & Air force and its ability to detect & destroy enemy Air defence systems with the improved doctrine of concealment, avoiding the question of morality and minimal collateral damage.
- There is a need for Space Situational Awareness for the military for Space Security and superiority and detect Adversary space activities. It will also help in continuous satellite availability during the war.

Participating Organizations

- Indian Army
- Defence Space Agency
- Planet
- Maxar
- Roter Group

Water Resource Management

- Utilization of various geospatial datasets like the digital elevation model (DEM) for the effective mapping of the drainage basin. Also, an integrated irrigation management system can enhance the optimum use of the water resources at the lowest level, i.e., farmers.
- Water resource information systems (WRIS) collectively provide the condition of water resources in India. Also, integrated water and crop information and management systems to aid the decision-making process concerning water resources.
- Heliborne geophysics technology is used for water resource management.
- Geospatial technology is used to revive the existing waterways and create a tourism circuit that will attract tourists and boost the city's local economy.
- The geospatial solution can effectively be utilized for the water supply. It can be used to identify water-deprived areas. Furthermore, smart metering helps to enhance the revenue of urban local bodies to a greater extent.

Participating Organizations

- Participating Organization
- National Mission for Clean Ganga
- Central Ground Water Board
- Art of Living
- National Water Development Agency
- National Water Informatics Centre
- Haryana Water Resource Authority
- Andhra Pradesh Groundwater and Water Audit Department
- National Hydrology Program
- * Orange City Water
- * Srinagar Smart City

Location Analytics and Business Intelligence

- Development of Digital Address Code (DAC) is a unique address identity linked to geospatial coordinates usable by all stakeholders. It will be linked to geospatial coordinates of the entrance to the address (in case of the independent unit) or the building containing the address (in case of apartments and business complexes/ office buildings). It will be unique for each address & will be permanent.
- Location intelligence was of utmost importance during the first COVID-19 wave in India. KRANTII (Knowledge Resources Analytics Network Technology Innovation and Integration), an online think-tank, leveraged geospatial and location technology to help COVID-affected families get the necessary help, and immediate hospitalization is required.
- Applications of location data in understanding road riding quality, route optimization, charging infrastructure planning for electric vehicles, autonomous driving, and improved navigation and flight management of drones were discussed during the session on the "rise of shared economy business model in India."
- A number of location intelligence applications in the retail sector, including store site selection, hyperlocal marketing, and inventory planning, were discussed. Furthermore, challenges pertaining to adopting location intelligence in the unorganized sector, which accounts for about 80% of the retail market in India, were also a part of the discussion.
- There was an elaborate discussion about the four stages of an outdoor ad campaign, i.e., Planning, Booking, Execution, and Reporting, and how location intelligence played a critical role within the entire value chain.
- 5G will be the first generation of mobile technology to have a more significant impact on businesses than consumers when it comes to monetization.

Participating Organizations

- Ola Mobility
- Department of India Post
- DataSutram
- Adonmo
- World Resource Institute
- MapmyIndia

Construction and Infrastructure

- Geospatial data is gradually evolving as a critical player in the planning and decision-making process for delivering urban services in a dynamic environment, developing comprehensive city management systems, and dealing with complex urban environmental issues in India.
- Integration of laser scanning and point cloud technologies with Building Information Modelling (BIM) enables the stakeholders in the Indian construction market to enhance productivity during pre-construction and design-to-execution processes by minimizing time and cost overruns; thus, making the market extremely competitive.
- Covid has inadvertently supported the acceleration of technology adoption in the construction industry of India. This is witnessed in the increased application of drone technology, AR/VR and 5D/ 6D (BIM), etc., to support remote working capabilities, digital collaboration, data exchange & sharing for insight-driven decision making.
- An integrated geospatial & BIM system enables monitoring, controlling, and analyzing data from construction sites and proves to be highly beneficial, both in terms of time and cost-saving, to the multiple types of stakeholders associated with construction projects

Participating Organizations

- Knight Frank
- Atkins
- Uttar Pradesh Public Works Department
- National Academy of Construction
- WSP
- Autodesk
- Aurangabad Smart City Development Corporation Limited
- NIGST, Hyderabad

Space Infrastructure and Indian Economy

- CORS network is crucial for different projects like digitalization of land records, one of the significant challenges. CORS Network is bringing in societal benefits or improving efficiency and a cost-saving mechanism in various government projects.
- The space policy encourages access to infrastructure, bringing business facilitation and collaboration, intending skilling through training programs, and promoting innovation in space infrastructure.
- Subscription and x as service to be driving business model for EO Industry

Participating Organizations

- Indian Space Association
- New Space India Limited
- Google
- Godrej Aerospace
- ITE&C, Govt of Telangana
- National Remote Sensing Centre
- Survey of India
- Synspective Inc.
- Bluesky Analytics

Surveyors' Training Program

- The two-day Survey Training Program, supported by The Institute of Engineers & National Institute for Geo-Informatics Science and Technology (NIGST), majorly focused on training the participants on the latest surveying tools and techniques for improved data collection.
- The theme of the training workshop was "Digitalization of Surveying Techniques for Improved Data Collection and Validation."
- The participants mainly comprised professionals serving in different sectors like land administration, construction, forestry, mining, etc.
- Key technologies discussed in the training program included 3D laser scanning & LiDAR, Robotics and Total Stations, Ground Penetrating Radars, Data Processing and Visualization, CORS network, Drones Mapping, Mobile Mapping systems, etc.
- Private partners who attended the program and held the training workshops include Trimble Navigation, Topcon Sokkia, FARO, Esri India, Survey of India, Roter Precision & PAN India

'Geospatial Mkt to Soar to ₹63k cr by '25'

FUTUREWISE Govt's policy moves will make India regional hardware hub, says Kant

Our Bureau

Mumbai: India's geospatial economy has potential to touch ₹63,100 crore by the end of 2025, growing at 12.8%, according to a report. The market is currently valued at ₹38,972 crore. Speaking at the launch of the India Geospatial 'Art of the Future' report, industry leaders said the recent government policy and the drone rules, for the industry to flourish but also to make it easier to innovate and make India a regional hardware hub.

Policy implementation will not differ from guidelines announced by the government. "It is truly a watershed moment where the government has taken several definitive steps to override overall three critical policies that have a direct impact on the geospatial ecosystem, namely the geospatial policy, the remote sensing policy and the drone rules," said Kant.

The government is currently analysing policies as well as data services including maps). As per projections by the Ministry of Science and Technology, the sector can now open up allowing geospatial data of the value of ₹1 lakh crore to be acquired and used by 2030.

India is already one of the leading exporters of geospatial services, Kant added. "However, with the recent reforms, it is expected that more companies might be getting involved in the manufacturing of GNSS chips and survey equipment. There is thus potential for India to become a regional hub for hardware supply," he said.

The government is ensuring that the updates announced in the guidelines are implemented.

Sunil Kumar, joint secretary at the Department of Science and Technology.

IIT-Kanpur scholar wins Young Geospatial Scientist award

Ropesh Goyal from IIT-Kanpur won the 'Young Geospatial Scientist' award in recognition of his unique contribution towards the development of the Indian Geoid Model and computation software.

Member of Space Commission and former ISRO Chairman, AS Kiran Kumar presented the award to Goyal during the inauguration of the Geospatial India 2021 conference hosted by the Geospatial World here.

The Young Geospatial Scientist award and a gold medal are presented every year since 2011 to promising scientists below 35 years of age in the field of geospatial technology.

Rachapudi Kamakshi Trust is an organisation founded to help young and talented individuals with great ideas and research work in the field of geospatial sciences.

Rachapudi Kamakshi (1981-2010), who had been interested in geospatial technology, remote sensing and GIS, had done geography honours from B.R. Ambedkar College, Delhi University, and pursuing M.E.A from I.I.P.M. Delhi before moving to the US in 2005.

There she completed Double Masters from California Lutheran University and worked with Lockheed Martin in America as a geospatial scientist.

'Geospatial tech key for development'

PNS ■ HYDERABAD

The developments and advances in geospatial technologies are crucial for sustainable development, Governor Dr Tamilisai Soundararajan said on Tuesday.

The Governor called for better application of geospatial technologies and tools for promoting sustainable development in fields like agriculture, transportation, defence, internal security, and infrastructure.

The Governor also highlighted the transformational changes taking place in geospatial technologies like mapping, surveying, remote sensing, and geographical information systems.

"It is high time that we need to explore and apply all these technologies for the all-round development of the country and emerge as the leader in leveraging these emerging technologies for progress and growth," she added.

The Governor's efforts for the Geospatial for their mission the use of geospatial technologies.

"The space technologies and geospatial structures when combined with the digital economy empowering tool, delegates from country represent organisations promoting sustainable development."

India's geospatial economy can grow to Rs 80,000 cr by 2025 if gov't implements right policies: Report

TNN / Dec 8, 2021, 04:28 IST

Hyderabad: Geospatial tech crucial for sustainable development says Governor Tamilisai

Hans News Service | 8 Dec 2021 1:23 AM IST

India's geospatial economy can grow to ₹80k cr by 2025: Report

TIMES NEWS NETWORK

Hyderabad: India's geospatial economy, which is currently valued at around ₹38,972 crore and is growing at nearly 13%, is poised to grow to ₹80,000 crore by the end of 2025, said the 'Geospatial Artha' report: Indian Geospatial Market, Economy, and Industrial Development Strategy' that was unveiled here on Tuesday at the GeoSmart India 2021 summit.

However, the report pointed out that if the Indian government charts out a geospatial industrial development strategy and implements by 2022 the three geospatial policies that are currently in the draft stage, the geospatial economy has the potential to clock a CAGR of 19.6% and hit 80,000 crore by 2025.

India's geospatial economy currently employs around 4.7 lakh people across user industries, government services and export services.

The Indian government is currently in the process of finalising the draft National Geospatial Policy (NGP) and the draft Indian Satellite Navigation Policy (SATNAV Policy), while it has already implemented the Guidelines for Geospatial Data (Guidelines for acquiring and producing geospatial data services including maps) in 2021. The report, which has been prepared under the aegis of the National Think Tank on Geospatial Strategy for New India, was released in the presence of Amit Khare, advisor to PM Narendra Modi and Dr Kiran Kumar, Vikram Sarabhai Professor, ISRO.

According to the report, infrastructure development, agriculture, water resources, land management, utilities and urban development are expected to drive the growth of the geospatial economy of the country. Khare said that the evolving technologies in the geospatial sector have brought about transformational changes whereby even an inch of land in India can be mapped, providing solid backups to services including maps) in 2021. The report, which has been prepared under the aegis of the National Think Tank on Geospatial Strategy for New India, was released in the presence of Amit Khare, advisor to PM Narendra Modi and Dr Kiran Kumar, Vikram Sarabhai Professor, ISRO.

People Say

“This was my first visit to GeoSmart India conference, and the overall experience was amazing as it was packed with knowledgeable and interesting sessions across various domains. It gives everyone a very good perspective on the latest happenings by various institutions including Government/Private/Semi-Government etc. Looking forward to join the future conferences.

Sinivas Rao Kollipara, CTO, L&T

“It was such a pleasure attending this year’s GeoSmart India 2021 conference. What a wonderful opportunity it was to meet the people from diverse backgrounds with a common connection of Geospatial Knowledge and breakthrough technological advancements in the fields Construction & Infrastructure, Space, Defence & Intelligence, Water Management and many more. It had all the necessary ingredients of a great event- content-wise, great Speakers, a wonderful audience, and world-class exhibitors. I must compliment Geospatial World for organising a wonderful event and I can’t wait to see what’s next!

Deben Moza, Executive Director- Head of Project Management Services, Knight Frank

“Being at GeoSmart India 2021 was a phenomenal experience for me. As we all know, that Geospatial domain creates direct or indirect impact on almost all the industry verticals. This makes GeoSmart India one of its kind platforms with the potential to act as an enabler for a sustainable and prosperous Bharat

Ankit Bhateja, Founder & Director, Xovian Aerospace Pvt. Ltd.

People Say

“

It was such a great honour to be part of the congregation assembled during this year's GeoSmart India 2021 conference held at Hyderabad. It was a wonderful opportunity to meet the people from multi-faceted backgrounds with a common unique connect of Geospatial Knowledge and Showcasing breakthrough technological advancements in the fields of Water management, Defence & Intelligence, Construction and Infrastructure etc. This mega event had all the necessary ingredients - brilliant Speakers having excellent content to share with, attentive audience, and of course world-class exhibitors. I must compliment Geospatial World for organising such an unforgettable event and I am eagerly planning to visit next time to share new strides & advancements as well !!

Sanjay Marwah, Member, Haryana Water Resource Authority

“

Namami Gange was extremely pleased to co-host the special session on “River & Water Resource Management” with Geospatial World at GeoSmart India 2021. This forum provides an interactive platform for the technocrats, decision-makers, leaders, academicians, industry experts & other stakeholders to engage and learn from each other.

I appreciate the efforts undertaken by Geospatial World in organizing this year's successful conference in the pandemic situation and I hope that we come back next year again with even more interesting issues and topics related to river systems & water resources.

Peeyush Gupta, Real-time information specialist, National Mission for Clean Ganga, Ministry of Jal Shakti
