Early Warning System – A Solution

Pushpendra Johari
SVP, Sustainability, RMSI

Early Warning System – Forecast

Primary hazard intensity

(like weather forecast, cyclone track forecast)

Secondary hazard intensity

(like flood flow and inundation forecast, landslide and avalanche forecast, cyclone wind and surge forecast)
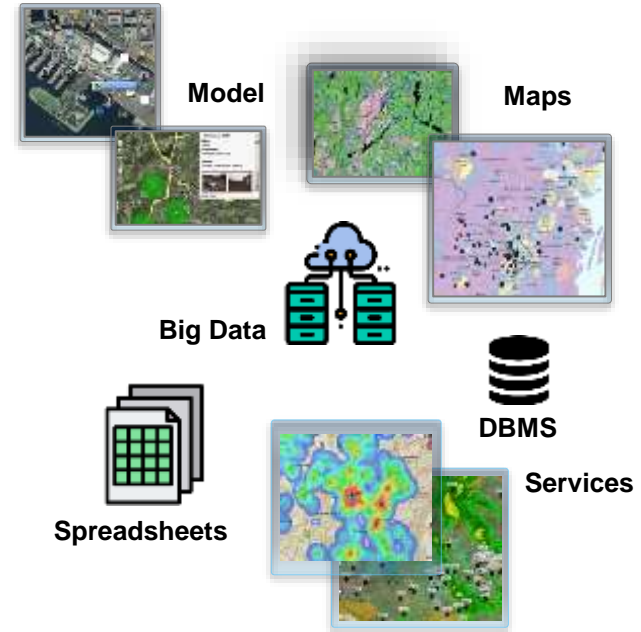

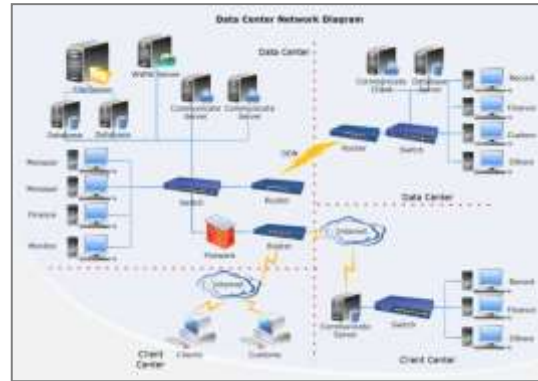

Impact severity

Based on hazard forecast estimates the potential impact on buildings, infrastructure and population

Warning

Models Used in Forecasting

Numeric Models

- Weather models
- Hydrological and hydraulic models
- Cyclone wind and surge models
- Etc.

AI / ML Based Models

- Neural networks based models for landslide and avalanche
- Correlation and Regression based models
- Etc.

Early Warning Systems - A Key Tool to Reduce the Impact of Climate Change-induced Disasters

Moderator

Pushpendra Johari

SVP, Sustainability, RMSI

Panelists

Shri L. Mohamed Mansoor

Additional Secretary,
Government of Puducherry

Dr. Nagaratna Kopparthi

Scientist(E), IMD

Dr. K. H. V. Durga Rao

Group Director, Disaster
Management Support Group

National Remote Sensing
Centre (NRSC), ISRO

Sri D. Ranga Reddy

Chief Engineer, CWC

Pratul Shrivastava

DGM, Sustainability,
(Risk & Insurance) RMSI

Dr. Pratap Singh

VP, Sustainability, RMSI
